### **DETAILED ACTION**

Applicants amendment canceling claim 2 in the paper of 1/19/2005 is acknowledged and has been entered. Claims 1, 5-7, 21-23 and 27-33 are at issue and are present for examination.

Applicants' arguments filed on 1/19/2005, have been fully considered and are deemed to be persuasive to overcome some of the rejections previously applied. Rejections and/or objections not reiterated from previous office actions are hereby withdrawn.

### ***Claim Objections***

Claims 1 and 27 are objected to because of the following informalities:

Claims 1 and 27 part a) each recite "...identical the amino acid sequence..." It is suggested that this be amended to "...identical **to** the amino acid sequence..."

Appropriate correction is required.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1, 6, 22, 23, 27, 28, 29, 31 and 32 are rejected under 35 U.S.C. 102(e) as being anticipated by Pompejus et al. (US Pat. App. Pub. No. US 2004/0180408 A1).

Pompejus et al. teach a number of *Corynebacterium Glutamicum* genes encoding proteins involved in carbon metabolism and energy production and methods of their use and expression. Pompejus specifically teach an isolated polynucleotide encoding the polypeptide having the amino acid sequence corresponding to RXA02492 which is at least 95% identical to the amino acid sequence of SEQ ID NO: 2, the polypeptide having phosphoglycerate mutase activity, as well as vectors and host cells (*C. glutamicum*) comprising said polynucleotide .

Thus claims 1, 6, 22, 23, 27, 28, 29, 31 and 32 are anticipated by Pompejus et al.
